02 / WEBSITE MANAGEMENT

Your website.
You’re in control.

An admin panel tailored to your business, with an optional AI assistant.

Standard admin panel

I configure a simple panel for your website: dishes, prices, photos, availability, offers, contact details and opening hours. Bookings and enquiries can be included when they are part of the project.

Support when you need help

I show you how to use the panel and help with errors or questions. Support channels, response times and maintenance coverage are agreed in the proposal. New features are scoped separately.

Custom panel with AI

I can add an assistant connected to your website’s data and approved functions. The manager can request changes in plain language and ask for ideas to improve the menu.

Two options, built around your needs

Use the standard panel for direct editing, or choose a custom panel for AI-assisted tasks. We agree the features before development starts.

02 / AI FOR YOUR MANAGER

Give it a task.
Review the result.

Available around the clock while the service and subscription are active.

“Update the menu for tomorrow”

For example: “Hide sold-out croissants, add the seasonal drink and draft its Spanish description.” The assistant shows the changes and the manager approves publication. Actions are logged, with a way to restore the previous version.

“How could we improve the menu?”

The assistant can suggest clearer categories, shorter descriptions and food pairings. With sales and cost data connected, it can help analyse demand and margins. A staff member verifies ingredients, allergens and factual claims.

Manager-only access

Only an authorised manager can control the assistant. Website visitors cannot access it. The assistant can change approved data only; payments, access permissions and record deletion are outside its basic scope.

A subscription based on usage

A monthly plan with an agreed AI usage or spending allowance. Additional usage follows agreed terms. Round-the-clock AI access is separate from the hours of human support.
