03 / YOUR BUSINESS WEBSITE

From browsing to booking.

Give guests the information and actions they need in one place.

Answers at a glance

What to try, what it costs, where you are and when you open. A mobile-friendly menu with photos, prices, ingredients and verified allergen information is easy to browse from a link or a table QR code.

A clear next step

Book a table, send a WhatsApp message, call or get directions. Pre-orders, delivery, deposits and online payments can be added when they suit your business.

A reason to visit

Breakfasts, seasonal specials, offers, events and announcements. Current photos and clear terms help guests decide whether your venue is right for them.

A simple guest journey

Google or Instagram → your menu → a booking or message → a visit. Each page helps the guest take the next step.

03 / BUILT FOR YOUR VENUE

Start with the essentials. Grow with demand.

Choose functions around the way your guests use your business.

For a bakery or coffee shop

A menu, opening hours, directions, new products and pre-orders for a chosen collection time. A prepaid balance or loyalty programme can be added for regular guests.

For a restaurant or cafe

Menus in the languages your guests need, photos, bookings with confirmation, events and contact information. Deposits for selected reservations are an optional addition.

For the owner

One place to update information and collect enquiries. Analytics can show menu views, contact clicks and submitted bookings. Sales reporting requires an order system or till connection.

How we work together

Discuss your goals → agree structure and design → develop → test on phones → launch and train your team. Another useful addition: a QR code on receipts for feedback and repeat visits.

Let’s talk about your business
